

CANARY TENSION (CT) HANGER

The Canary Tension (CT) Hanger is the latest addition to Canary, LLC's lineup of modern wellhead safety products. Conventional methods of putting tubing in tension fail to maintain well control. The CT Hanger reduces this risk by operating directly through the blowout preventer. In addition, the hanger reduces rod cuts and results in less wear and tear on your wellhead tubing.

FEATURES

- Puts tubing in tension while retaining well control
- Two-part mandrel allows for separation to set anchors
- Designed to perform with a tension to 150,000 pounds and up to 10,000 PSI of pressure
- Fit any standard 7" TCM bowl but can be modified to be used with various bowl types

BENEFITS

- Economical
- Well-suited to support flow or pump operations
- Lands and operates through the blowout preventer
- Includes BPV Threads for maintained well control
- Significantly improves safety of personnel
- Offers increased environmental protection
